

Cyral for Data Security Governance

Why Cyral

End-to-End Solution

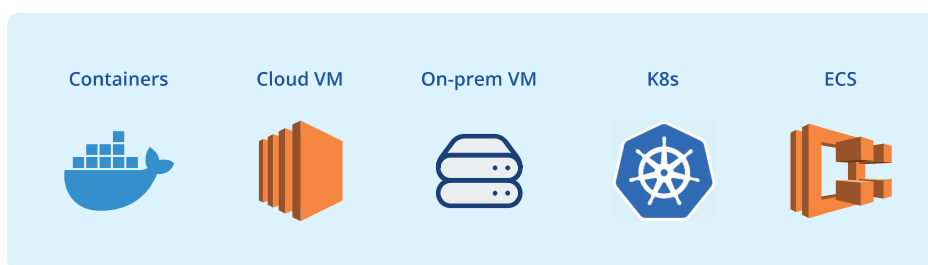

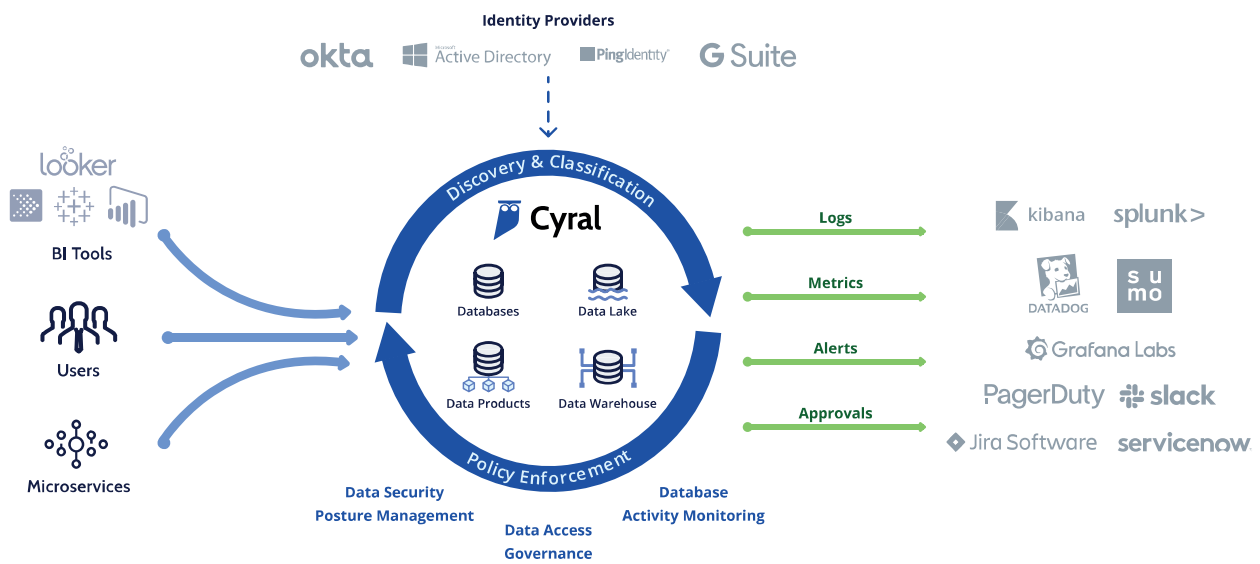

Tackles Shadow Access

IaC and No Code Administration

Cyral enables:

- Discovery & Classification
- Database Access Management
- Data Masking
- Attribute-based Access Control
- Row and Column-Level Security
- Monitoring and Reporting

Cyral Solution

Sidecar pattern

- Network (L4) proxy
- No latency overhead
- Autoscaling support

Incremental rollout

- Segment by client type
- Segment by database
- Segment by environment

High availability

- Fault tolerant
- Pass-through mode
- Multi AZ support

Platform Capabilities

► Discovery & Classification

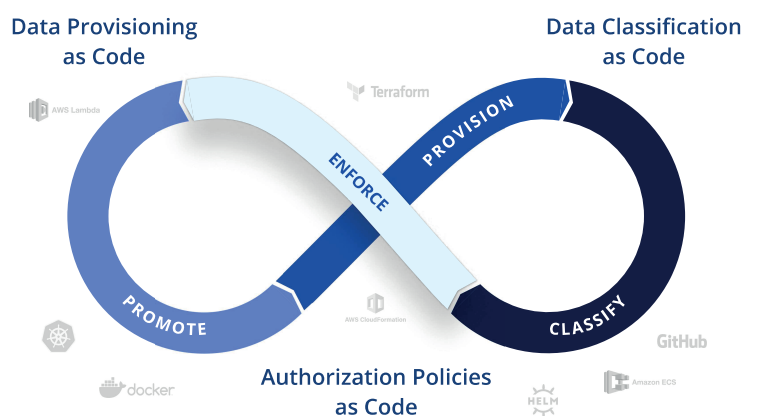

- Continuously scanning data repositories
- Pulling in metadata from data catalogs
- Integrating with purpose-built discovery tools
- Annotations supplied by developers in code

► Access Control

- Federating authentication with existing identity provider
- Eliminating users from having database passwords
- Leveraging IAM entitlements for administering access
- Mapping queries from service accounts to user identities

► Fine-Grained Authorization

Monitoring & Reporting
