

Active Directory Auditing Software

Netwrix Auditor for Active Directory delivers security intelligence about what's going on in Active Directory and Group Policy. Audit Active Directory changes and logons to mitigate the risk of privilege abuse, prove IT compliance and streamline troubleshooting.

Comprehensive change auditing

Detects all changes in your Active Directory and Group Policy and provides the critical who, what, when and where details and before and after values.

Logon auditing

Facilitates access control by reporting on both failed and successful attempts to log on to critical systems, as well as all ADFS logon attempts, and displaying the full logon history of any user.

Reporting on current configurations

Shows the current state of your users and groups, their permissions in Active Directory, your GPOs and their settings, and more, so you can easily compare them to a known good baseline.

Delegated user access reviews

Enable data owners to approve permissions and access requests instead of burdening your IT team with the optional access reviews module.

Group Policy monitoring

Reports on changes to audit policy settings and other Group Policy modifications with full details and before and after values

Active Directory security and compliance

Provides out-of-the-box reports aligned with controls from a wide range of standards, including PCI DSS, HIPAA, SOX, GDPR, GLBA, FISMA/NIST, CJIS and more.
