

# Build trusted software, faster

Accelerate innovation while reducing risk with Snyk's developer security platform.

Snyk is the trusted partner of the world's most innovative organizations, who use Snyk's AI-powered security intelligence and automation to:

empower developers to secure code from the start

provide powerful and scalable AppSec governance

unlock holistic application risk management

AppSec can't scale to keep pace with development if it manually triages every vulnerability and chases down the remediation. Developers need to go fast while the business remains secure. Snyk builds trust between Developers and AppSec teams so they can embrace DevOps, Cloud, and now, AI, without limits.

## The reliable path to trusted software

starts with **Developer Security**, scales with **DevSec Governance**, and is navigated through **Application Risk Management**.

Secure code-to-cloud developer experience to find and fix hand-written and AI-generated code, fast

Comprehensive governance capabilities to unite developers and security, and to scale

Holistic application risk management to uncover and manage actual business risk

## Fortune 500 companies saved on average in the first year...

### DEVELOPER PRODUCTIVITY

**\$8.12M** savings based on automation & efficiency gains

### RISK REDUCTION

**\$4.8M** savings based on risk avoidance

# Snyk Developer Security Platform

with unmatched speed, accuracy, coverage and ease of use

## Snyk AppRisk

Visibility, coverage, and risk-based prioritization to govern your security program

## Snyk Code

Find and fix vulnerabilities in human and AI-generated code in real time.

## Snyk Open Source

Find and fix vulnerabilities in your open source code and dependencies to reduce 3rd party risk.

## Snyk Container

Find and fix vulnerabilities in containers and Kubernetes applications.

## Snyk Infra. as Code

Find and fix Kubernetes and Terraform infrastructure as code issues.

## DeepCode AI Engine

Powered by Snyk's purpose-built hybrid AI to find, analyze, and fix security issues fast.

## The Snyk Difference

Organizations building their future on innovation need to reliably secure code without slowing delivery. For our customers, limitless innovation begins with software they can trust. Trust begins with Snyk.

### Developer Experience

AI-powered fixes and prioritization context via developer-friendly UI and workflow integrations for a frictionless developer experience.

### Extensibility

Rich API that enables customization, automation, and integration into custom workflows.

### Security Intelligence

Snyk's expert-led security intelligence practice helps you identify issues sooner, with more accuracy, and fix them more quickly with the help of DeepCode AI, hand-curated data, and enriched metadata.

### Governance

Visibility and control through custom rules, analytics and reporting, contextual risk-based prioritization, policy setting, and management.

### Security Education

Integrated and interactive research tools help developers learn secure development best practices as part of their workflow.

## Integrated with development tools across the SDLC

Snyk supports your favorite languages and seamlessly integrates with your tools, pipelines, and workflows.
