The Syteca Platform Securing Your Inside Perimeter

Syteca
formerly Ekran System

Powerful access controls ▪ Advanced monitoring capabilities ▪ One single platform

Employee errors and malicious activities account for 80% of insider incidents*

Limited visibility into user activity poses significant security risks:

- Credential theft causes **20%** of security breaches*
- The vast majority of threats — **87%*** — go undetected for longer than a month
- Each data breach costs an average of **$4.88 million****

*2023 Cost of Insider Risks Global Report by Ponemon Institute
**2024 Cost of a Data Breach Report by IBM Security

Transforming human risks into human assets

Syteca's advanced **user activity monitoring** and **privileged access management** solutions turn weaknesses into strengths.

The Syteca platform empowers you to effortlessly manage access, gain real-time insights into user actions, and respond swiftly to potential threats.

Boost your CISO's efficiency, elevate your organization's security posture, and simplify compliance — all with a single platform.

Comprehensive cybersecurity for your inside perimeter

Privileged access management

Precise access control
Get granular control over high-risk user interactions and prevent unauthorized access with MFA and optimized password management.

Robust credential management
Secure passwords in a vault, enable controlled sharing, and automate rotation. Leverage check-in/check-out for temporary access.

Privileged session monitoring
Track privileged user actions with real-time playback and multi-monitor recording. Employ index-based search for swift audits.

Automated account discovery
Identify and secure user accounts seamlessly, ensuring no access points are overlooked.

User activity monitoring

Advanced user monitoring
Enhance accountability by overseeing how regular, privileged, and third-party users interact with your sensitive data.

Real-time alerts
Receive prompt notifications about suspicious user actions and automate incident response.

Visually structured analytics
Make informed security decisions with comprehensive reports, productivity dashboards, and detailed user activity logs.
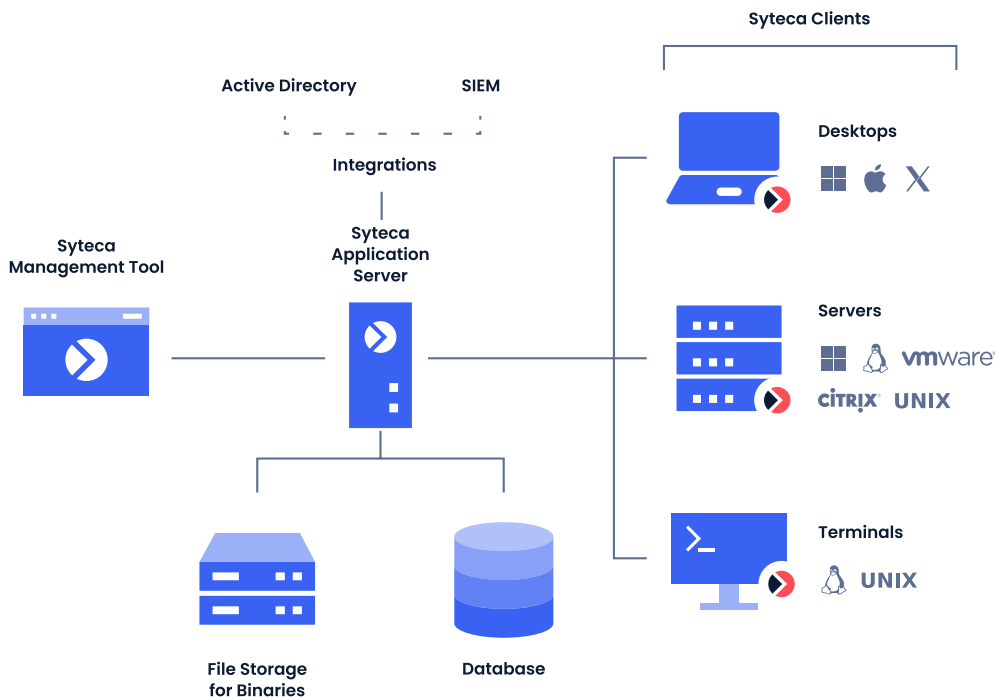

Detailed forensic evidence
Take advantage of session recordings and detailed search parameters to streamline incident investigations and reconstruct the chain of events.

Meet cybersecurity standards: HIPAA, PCI DSS, NIS2, DORA, NIST, GDPR, SWIFT, ISO

Syteca supports more platforms than other competitors

SELinux / Linux ⬛ Apple ⬛ UNIX® ⬛ vmware ⬛ aws ⬛ CITRIX

Platform benefits

Prompt incident response with a visually structured evidence trail

Uninterrupted monitoring with continuous oversight, even during network loss

Fast and painless deployment

Seamless integration with SIEM tools, ticketing systems, and SSO solutions

Lightweight agent and optimized data storage

Military-grade data encryption of passwords, audit logs, and connections

Why Syteca?

🕐 Save time

- Deploy Syteca quickly and painlessly with our professional tech support
- Minimize downtime with automated processes, incident alerts, and real-time threat response

💲 Save money

- Only pay for the security features your organization needs
- Reduce your incident-handling costs by up to 50%

Guard your reputation

- Protect data and comply with IT requirements to boost your brand's image
- Prevent reputational damage with a proactive insider risk management approach

👥 Empower your team

- Convenient dashboards enable your security team to make data-driven decisions
- Retain employee confidence with powerful anonymization of personal data
